FLOW

Freelance Business Operating System

Your business. Organized. Automated. Visible.

VERSION 1.0

HYNOMA Flow — User Guide

01

Welcome to HYNova Flow

One organized workspace for managing the operational side of your freelance business.

Your business, one connected system.

HYNova Flow brings your leads, clients, projects, tasks, time, invoices, payments and expenses into one connected system. Instead of managing scattered spreadsheets and notes, you can keep your core business operations in one place.

LEADS

Track prospects

Track prospects, potential opportunities and follow-ups in one place.

CLIENTS

Manage relationships

Keep client information organized and connected to your work.

PROJECTS

Manage client work

Manage projects, tasks, time and profitability from one workspace.

FINANCE

Track the numbers

Track invoices, payments, expenses, revenue and profitability.

Before You Begin

01

Enable Macros

HYNova Flow uses Excel automation for system maintenance and calculated-field management. If Excel displays a security warning, enable the workbook's content/macros if you trust the file.

02

Review SETTINGS

Review the available services, categories, statuses, priorities, payment methods and other supporting options before entering data.

03

Understand Input vs. Calculated Fields

Enter information only into fields intended for user input. Calculated fields are maintained automatically by HYNova Flow.

04

Save Your Workbook

Save your workbook regularly. Keeping a backup is especially important before making significant structural changes.

05

Run Your First Refresh

After your initial setup, use the Refresh System button to ensure calculated values and supporting system data are up to date.

TIP

Build your workflow gradually. You do not need to enter every module at once.

03 — THE 60-SECOND TOUR

Understand the system in one minute.

Before diving into the details, understand what each part of HYNova Flow is responsible for.

START HERE

Your home base

Orientation, navigation and system guidance.

LEADS

Who might buy?

Track prospects and follow-ups.

CLIENTS

Who are you working with?

Maintain your client records.

PROJECTS

What are you delivering?

Connect clients to actual work.

TASKS

What needs to get done?

Break projects into actionable work.

TIME

How long did it take?

Record working time against your work.

INVOICES

What did you bill?

Track amounts owed.

PAYMENTS

What did you collect?

Record actual money received.

EXPENSES

What did it cost?

Track business and project costs.

DASHBOARD

What does it all mean?

Turn your operational data into business visibility.

Get your first workflow running.

Don't try to learn the entire system at once. Follow this short sequence and you'll have your first connected workflow running in about 15 minutes.

ONBOARDING CHECKLIST

Check each step as you complete it.

00–02	☐ Enable Macros Enable Excel content/macros if prompted.
02–04	☐ Review SETTINGS Check your services, categories, statuses and priorities.
04–06	☐ Add Your First Lead Add a prospect and set the next follow-up.
06–08	☐ Add a Client Create a client record.
08–10	☐ Create a Project Connect your project to the client.
10–12	☐ Add Tasks Break the project into actionable work.
12–15	☐ Review the DASHBOARD Refresh the system and see your business data come together.

05 — QUICK START

From your first lead to business visibility.

Follow these steps to get HYNova Flow working for your business.

#	MODULE	WHAT TO DO
01	SETTINGS	Configure your lists and options.
02	LEADS	Add prospects and follow-up dates.
03	CLIENTS	Add your clients.
04	PROJECTS	Create active projects.
05	TASKS	Break projects into actionable work.
06	TIME TRACKING	Record working sessions.
07	INVOICES	Record amounts billed.
08	PAYMENTS	Record money received.
09	EXPENSES	Record business costs.
10	DASHBOARD	Review business performance.

RECOMMENDED ROUTINE

Update your operational data as work happens rather than trying to reconstruct everything at the end of the month.

06 — WHERE DO I GO?

Find the right place instantly.

Not sure which sheet to use? Start with what you want to accomplish.

I WANT TO...	GO TO...
Add a prospect	LEADS
Add a customer	CLIENTS
Start client work	PROJECTS
Create work items	TASKS
Record working hours	TIME TRACKING
Track money owed	INVOICES
Record money received	PAYMENTS
Record costs	EXPENSES
Change dropdown options	SETTINGS
Update the system	REFRESH SYSTEM

07 — INPUT VS AUTOMATIC

You enter the facts.

HYNOVA Flow handles the calculations and turns your source data into useful business information.

YOU ENTER

Source Data

KPIs
Dashboard

THE GOLDEN RULE

Enter the source information. Do not manually overwrite calculated fields.

Understanding the Workflow

HYNOVA Flow connects the operational stages of your business.

How the connection works

LEAD → CLIENT	A prospect can become an active client.
CLIENT → PROJECT	Client work is organized into projects.
PROJECT → TASK	Projects are broken into actionable tasks.
TASK → TIME	Working time can be recorded against tasks.
PROJECT → INVOICE	Project work can generate invoices.
INVOICE → PAYMENT	Payments update the amount actually collected.
ALL DATA → DASHBOARD	Operational data becomes business visibility.

START HERE

Your orientation and navigation page.

Your starting point

START HERE is designed to help you understand the system before you begin working inside the operational sheets.

NAVIGATION

Move between modules

Use the navigation buttons to move between the dashboard and operational areas.

QUICK START

Know what to do next

Follow the recommended order for setting up and using your system.

WORKFLOW

Understand the connections

See how leads, clients, projects, tasks and financial records connect.

REFRESH SYSTEM

Keep the system current

Use Refresh System when calculated values or dashboard information need to be brought up to date.

IMPORTANT

START HERE is for orientation and navigation. Your daily work happens inside the operational sheets.

DASHBOARD

Turn operational data into business visibility.

BUSINESS CONTROL CENTER

See what is happening across your business.

The dashboard summarizes operational and financial information from the rest of the system.

Key Metrics

METRIC	WHAT IT TELLS YOU
Total Revenue	Value billed through recorded invoices.
Cash Collected	Money actually received.
Outstanding	Unpaid invoice balances.
Total Expenses	Recorded business and project costs.
Total Profit	Revenue remaining after recorded expenses.
Profit Margin	Profit relative to revenue.
Active Projects	Current project workload.
Overdue Tasks	Tasks requiring attention.
Overdue Invoices	Outstanding invoices past their due dates.
Billable Hours	Recorded billable working time.
Collection Rate	How much billed revenue has been collected.
Effective Hourly Rate	Revenue generated per recorded project hour.

How to use the dashboard

- 01 — Update** Enter or update information in the operational sheets.
- 02 — Refresh** Run Refresh System when appropriate.
- 03 — Review** Use the dashboard to identify trends, problems and opportunities.
- 04 — Decide** Use the information to make better business decisions.

BEST PRACTICE

Use the dashboard for decisions. Use the operational sheets for data entry.

LEADS

Turn prospects into an organized pipeline.

Purpose

Use LEADS to record prospects, estimate opportunities and maintain a clear follow-up process.

Key Fields

FIELD	PURPOSE
Lead ID	Unique reference for the lead.
Name / Company	Identifies the prospect.
Contact Information	Provides communication details.
Source	Shows where the lead originated.
Estimated Value	Potential value of the opportunity.
Probability	Estimated likelihood of conversion.
Last Contact	Most recent interaction.
Next Follow-up	Next planned contact.
Follow-up Status	Automatically indicates follow-up timing.

Lead Workflow

01 ADD LEAD → 02 ESTIMATE VALUE → 03 SET FOLLOW-UP → 04 UPDATE → 05 CONVERT OR CLOSE

BEST PRACTICE

Every active lead should have a clear next action or follow-up date.

12

CLIENTS

Your central client record.

Purpose

CLIENTS stores the core information about the people or businesses you work with and connects them to projects and financial activity.

CLIENT RELATIONSHIP

CLIENT → PROJECT → INVOICE → PAYMENT

Key Information

FIELD	PURPOSE
Client ID	Unique client reference.
Client Name	Client or business name.
Company	Associated business.
Contact Details	Communication information.
Status	Current client status.
Business Metrics	Revenue, profit, projects and latest project information.

IMPORTANT

Avoid changing a Client ID after related projects, invoices or other records have been created.

PROJECTS

Manage client work from start to finish.

PROJECT CONTROL

Know what the work is worth.

Projects connect client work with tasks, time, revenue, expenses and profitability.

Key Fields

FIELD	PURPOSE
Project ID	Unique project reference.
Client ID	Connects the project to a client.
Project Name	Identifies the work.
Start / End Date	Defines the project timeline.
Status	Current project stage.
Quoted Price	Agreed or expected project value.
Estimated Hours	Expected workload.
Actual Hours / Revenue / Expenses / Profit	Measures project performance and profitability.

PROJECT PROFITABILITY

REVENUE – EXPENSES = PROFIT

Profit Margin and Effective Hourly Rate provide additional context.

BEST PRACTICE

Keep Project IDs unique and use the same ID consistently throughout related records.

TASKS

Turn projects into actionable work.

Purpose

TASKS breaks projects into smaller pieces of work so deadlines, priorities and progress can be managed clearly.

Key Fields

FIELD	PURPOSE
Task ID	Unique task reference.
Project ID	Connects the task to its project.
Task Name	Describes the work.
Status	Current completion stage.
Priority	Indicates importance.
Due Date	Target completion date.
Completion %	Current progress.
Actual Hours / Task Health	Tracks time and automatically highlights task condition.

TASK HEALTH

COMPLETED — Task status is Completed

OVERDUE — Due date has passed

AT RISK — Deadline is close and progress is low

ON TRACK — No immediate warning condition

BEST PRACTICE

Create tasks that are specific enough for you to clearly determine when they are complete.

TIME TRACKING

Understand where your working hours go.

TIME CALCULATION

$$\text{END TIME} - \text{START TIME} - \text{BREAK} = \text{TOTAL HOURS}$$

$$\text{Billable Amount} = \text{Total Hours} \times \text{Hourly Rate}$$

Key Fields

FIELD	PURPOSE
Project ID	Project being worked on.
Task ID	Specific task being worked on.
Start Time	Beginning of the session.
End Time	End of the session.
Break (Hours)	Non-working time during the session.
Total Hours	Automatically calculated working time.
Hourly Rate	Rate used for billable calculations.
Billable?	Determines whether the time contributes to billable amount.

IMPORTANT

Enter valid Excel date/time values. Incorrect time values can produce incorrect hour calculations.

INVOICES

Track what you billed and what remains outstanding.

INVOICE LIFECYCLE

INVOICE → PAYMENT → BALANCE → STATUS

FIELD	PURPOSE
Invoice ID	Unique invoice reference.
Client ID	Connects the invoice to a client.
Project ID	Connects the invoice to project work.
Invoice Date	Date the invoice was issued.
Due Date	Expected payment date.
Invoice Amount	Amount billed.
Paid Amount	Amount recorded through payments.
Balance / Status / Days Overdue	Automatically reflects the invoice's current state.

Invoice Statuses

PAID	Balance is zero.
PARTIALLY PAID	Payment has been received but a balance remains.
PARTIALLY PAID - OVERDUE	Partial payment exists and the remaining balance is overdue.
OVERDUE	Outstanding balance remains after the due date.
DUE	Outstanding balance exists but the due date has not passed.
NO DUE DATE	No due date has been entered.

IMPORTANT

Do not manually overwrite calculated payment, balance, status or days-overdue fields. Record actual payments in PAYMENTS instead.

17

PAYMENTS

Record money actually received.

How to record a payment

- 01 Find the invoice.
- 02 Enter the Invoice ID.
- 03 Enter the actual amount received.
- 04 Enter the payment date and details.
- 05 Refresh the system when appropriate.

EXAMPLE

\$1,000 Invoice

Payment received: **\$400**
Remaining balance: **\$600**

BEST PRACTICE

Record the payment instead of manually changing the invoice balance.

EXPENSES

Track the costs behind your work.

PROFITABILITY

$$\text{REVENUE} - \text{EXPENSES} = \text{PROFIT}$$

Examples of Expenses

CATEGORY	EXAMPLES
Software / Business Services	Software, tools and business subscriptions.
Project Materials	Costs directly related to project delivery.
Outsourced Work	Freelancers or contractors.
Advertising	Marketing and promotional spending.
Travel / Operating Costs	Project travel and general business operating costs.

BEST PRACTICE

Record expenses consistently so project profitability and business performance remain meaningful.

SETTINGS

Configure the supporting lists used throughout your system.

What belongs here?

Services
Categories
Statuses
Priorities
Payment Methods
Other dropdown and supporting values

IMPORTANT

Review the existing values before changing them. Removing or changing values that are already being used elsewhere can create inconsistent data.

RECOMMENDATION

Keep your lists clean, intentional and free of duplicates.

SYSTEM MAINTENANCE

REFRESH SYSTEM

One action designed to bring your system back up to date.

What Refresh System Does

01	Remove unintended empty table rows
02	Restore calculated formulas
03	Recalculate workbook values
04	Refresh supporting system lists
05	Recalculate dashboard information
06	Prepare the workbook for continued entry

FIRST RESPONSE

If something looks outdated or unexpected, refresh before troubleshooting.

When should you refresh?

- After a significant batch of changes
- When dashboard information looks outdated
- When calculated values do not appear current
- After several records have been added or changed
- Before reviewing important business metrics

Keep the system healthy.

✓ DO

Use unique IDs

Keep records identifiable.

Enter actual payments

Record what was actually received.

Keep dates valid

Use proper Excel date values.

Refresh after major changes

Keep calculated information current.

× DON'T

Overwrite formulas

Calculated logic should remain intact.

Delete calculated fields

They are part of the system.

Change IDs after linking

Relationships depend on stable IDs.

Type over dashboard calculations

The dashboard is driven by your data.

Data Entry Rules

A few simple rules keep the system reliable.

01

Use Unique IDs

Each lead, client, project, task and invoice should have a consistent unique reference.

02

Keep Relationships Consistent

Use the correct Client ID, Project ID, Task ID and Invoice ID when creating related records.

03

Don't Overwrite Calculated Fields

Let HYNova Flow calculate derived values automatically.

04

Enter Real Dates as Dates

Avoid entering dates as plain text.

05

Enter Valid Excel Times

Time calculations depend on valid Excel time values.

06

Record Actual Payments

Payments should be recorded in PAYMENTS rather than manually changing invoice balances.

07

Save Regularly

Maintain backups of important versions of your workbook.

See HYNova Flow in action.

Here's what a simple client engagement looks like from beginning to end.

01	Lead — Add ACME Studio as a prospect.
02	Client — Create the client record.
03	Project — Create the Website Project.
04	Tasks — Break the project into actionable work.
05	Time — Record 12.5 hours of work.
06	Invoice — Record the \$1,200 amount billed.
07	Payment — Record the \$1,200 actually received.
08	Expense — Add any applicable project costs.
09	Refresh — Recalculate and update the system.
10	Dashboard — Review the resulting business information.

Common Issues

Start with the simplest explanation first.

WHAT YOU SEE	WHAT TO CHECK	FIRST ACTION
Dashboard looks outdated	Recent data changes	Refresh System
Calculated field is blank	Required source information	Check the source record
Payment doesn't affect invoice	Invoice ID	Verify Invoice ID
Invoice status looks wrong	Amount, payments and due date	Check invoice + refresh
Task is overdue	Due date and status	Review task
Dropdown option is missing	SETTINGS	Check the relevant list

DO NOT EDIT SYSTEM LOGIC

Check your data and refresh the system before attempting to modify formulas or system logic.

Something looks wrong?

Follow this sequence before changing anything inside the system.

DO NOT MODIFY SYSTEM LOGIC

Check your source data and refresh the system first. If the issue remains, investigate the relevant module rather than editing formulas.

Make the system work for you.

Good data habits produce better business visibility.

01

Keep Data Current

Update records as work happens.

02

Use Consistent Naming

Make records easy to recognize and connect.

03

Keep IDs Stable

Avoid changing identifiers after relationships exist.

04

Review the Dashboard

Use your numbers to spot trends and problems.

05

Protect Calculations

Let the system maintain calculated fields.

06

Keep Backups

Protect important business information.

Enter accurate data once.

Keep it organized.

Let HYNova Flow turn it into useful information.

FINAL CHECK

READY TO GO?

Complete these checks before getting started.

SYSTEM SETUP

- ☐ Macros enabled
- ☐ SETTINGS reviewed
- ☐ Services configured
- ☐ Categories configured
- ☐ Statuses reviewed
- ☐ Priorities reviewed

BUSINESS DATA

- ☐ Leads entered
- ☐ Clients entered
- ☐ Projects created
- ☐ Tasks added

FINANCIAL TRACKING

- ☐ Time tracking ready
- ☐ Invoices organized
- ☐ Payments recorded
- ☐ Expenses ready

FINAL CHECK

- ☐ System refreshed
- ☐ Dashboard reviewed
- ☐ Backup saved

You're ready.

Use HYNova Flow consistently and let it become the central operational workspace for your freelance business.
